

Model for scattering cross section

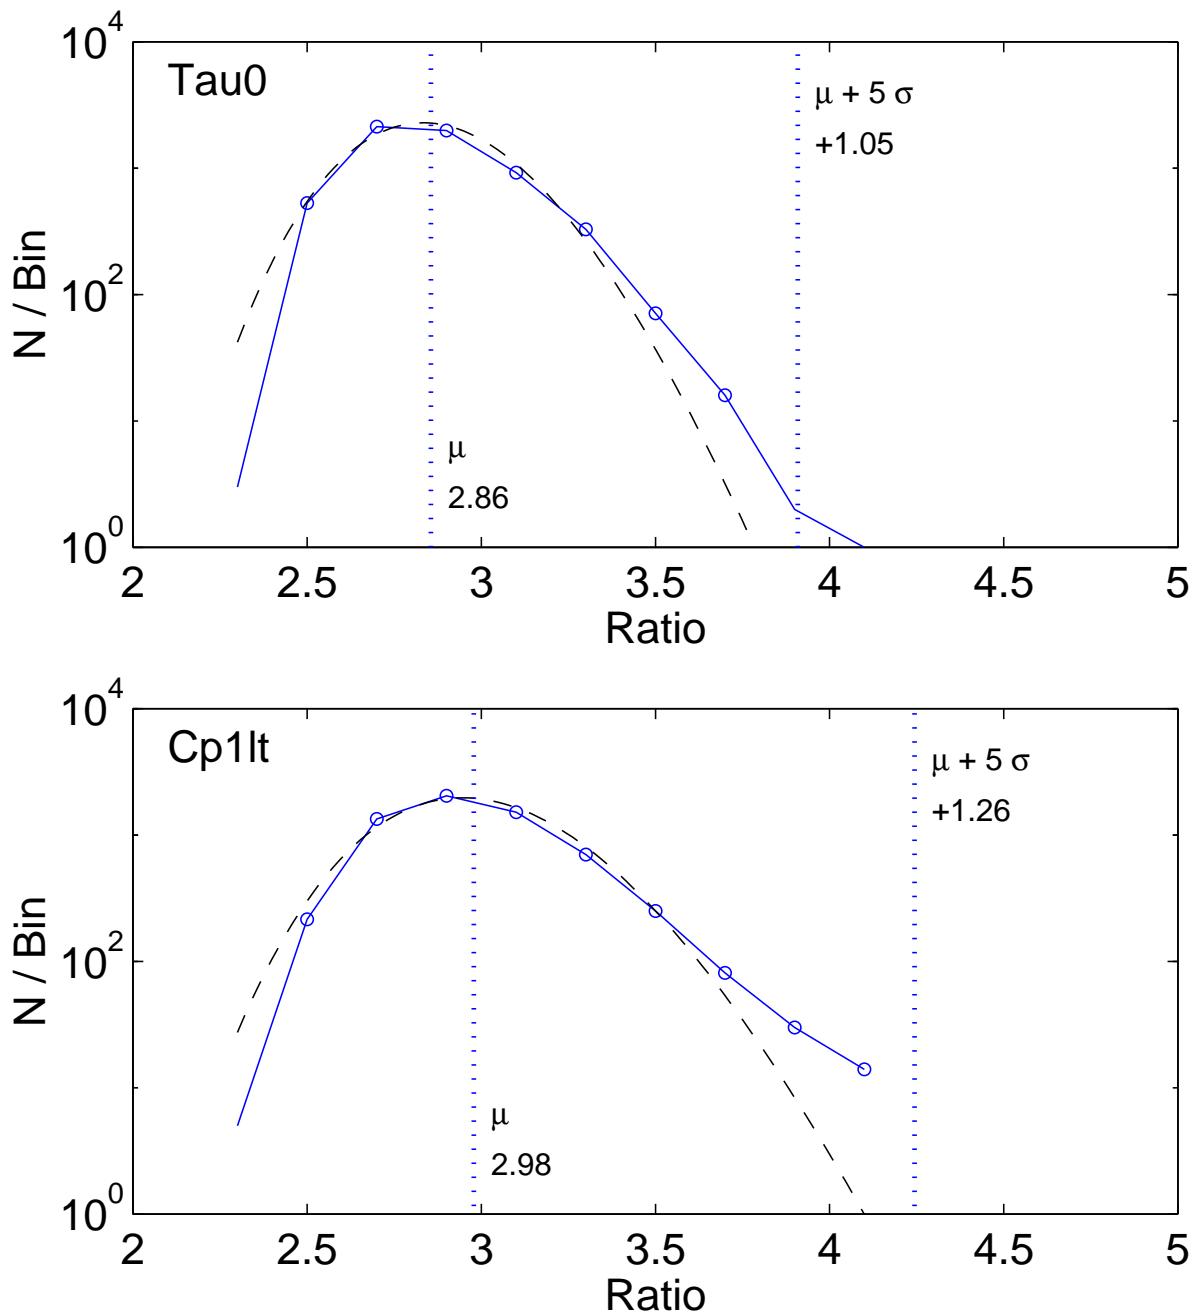

Sensitivity comparison

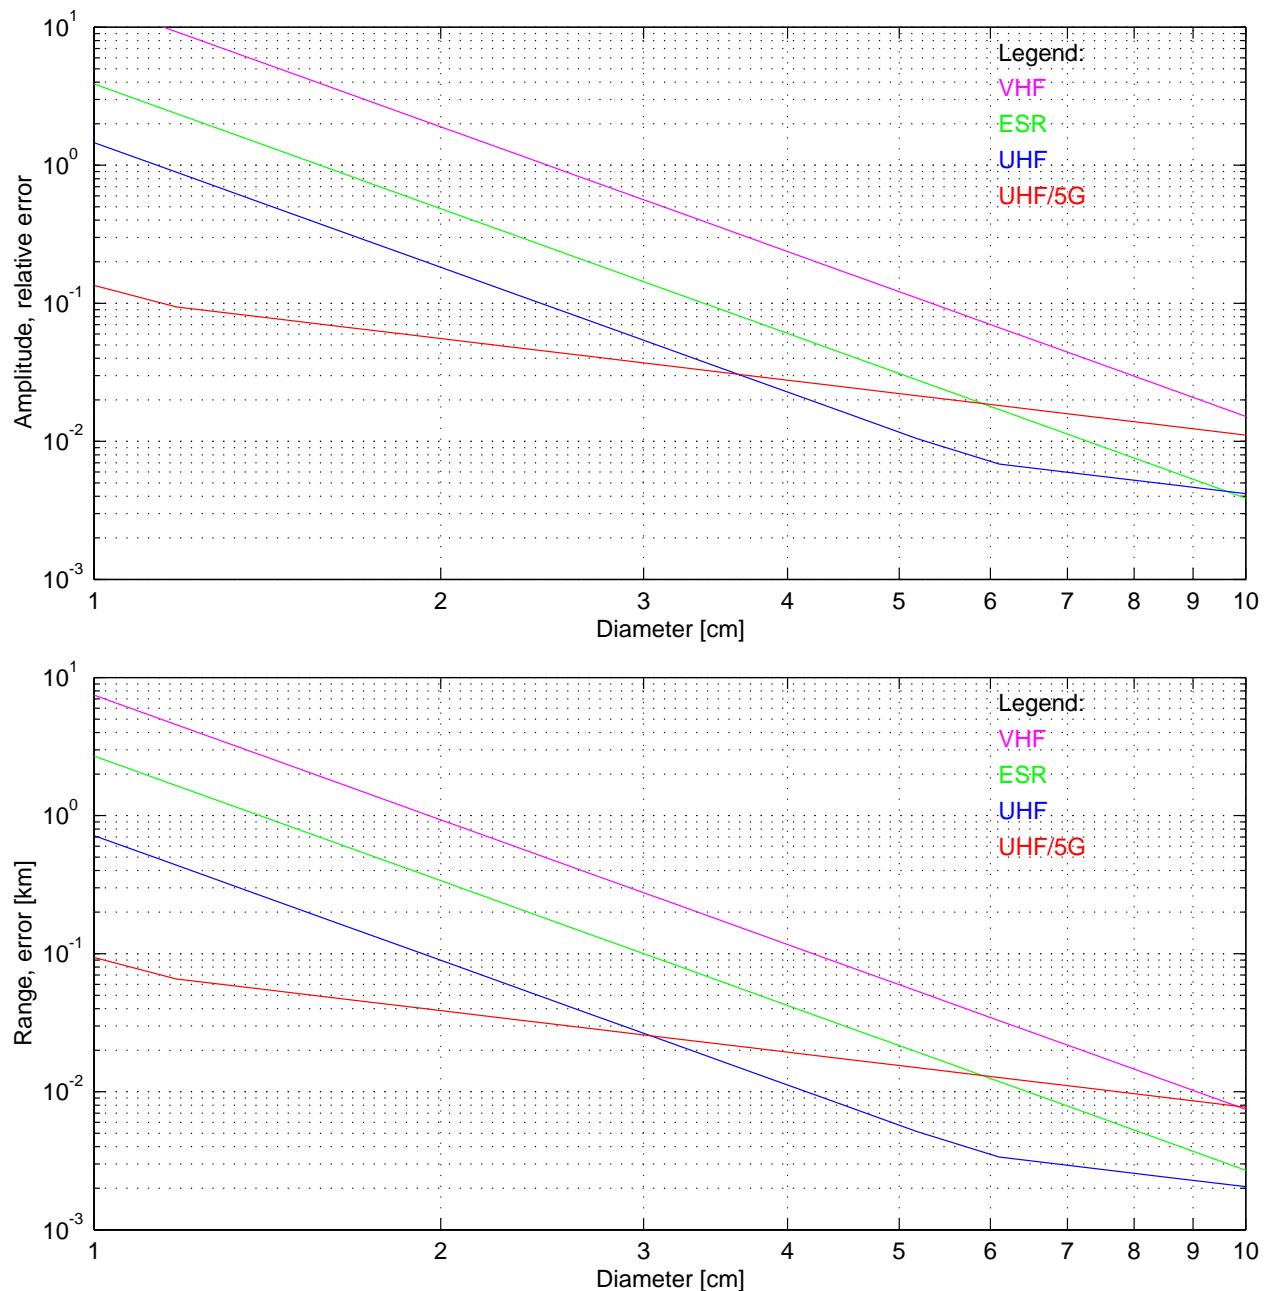

Radar properties	VHF	ESR	UHF	FGAN	U5G	LUO
Frequency [MHz]	224	500	933	1330	5000	5625
Wavelength [m]	1.338	0.600	0.321	0.225	0.060	0.053
Transmission [MW]	3.0	1.0	1.5	1.6	0.003	0.3
Antenna gain [dB]	43.1	45.3	48.1	49.7	62.5	47.5
Max duty cycle [%]	12.5	25.0	12.5	3.7	25.0	0.12
Noise temperature [K]	100	60	80	209	60	300

Energy-to-noise ratio for 3 cm target						
Cross section σ_* [mm ²]	0.16	3.9	47	190	710	710
Received power [aW]	0.18	0.81	15.3	69.3	12.1	0.96
$\sqrt{\text{SNR}_N}$	1.3	4.9	13.2	9.4	19.1	0.2
Ref. diameter [cm]	2.5	1.6	1.1	1.3	0.5	12.7

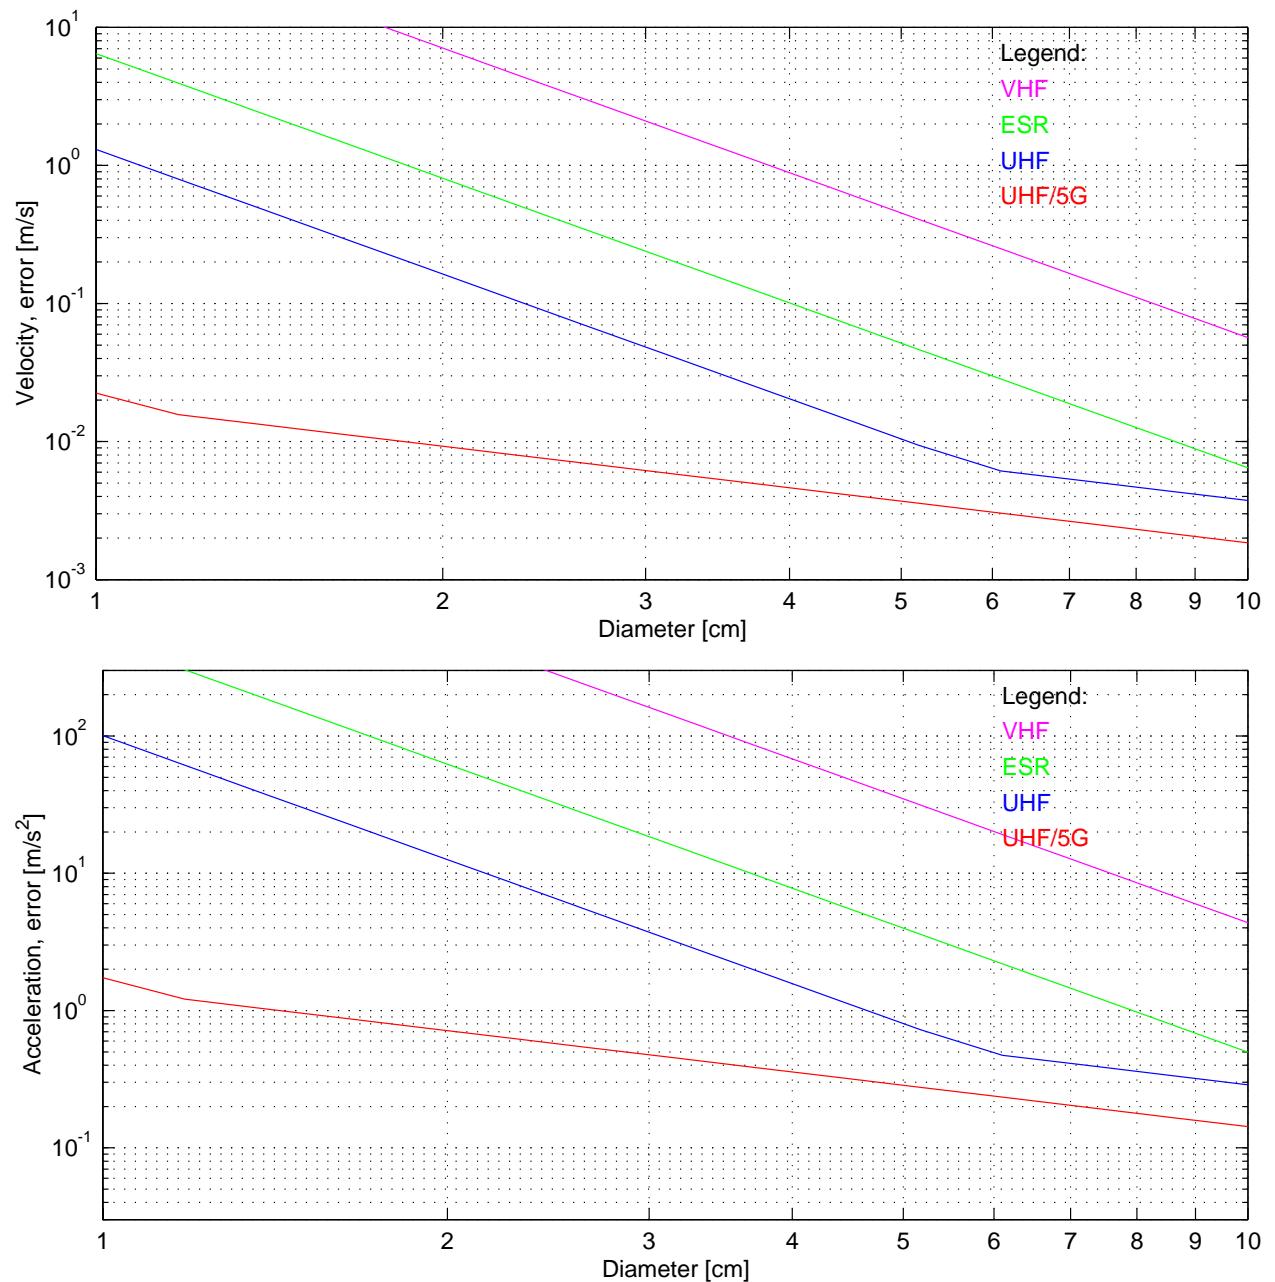

Distribution of ratio \mathcal{R} when there is no signal

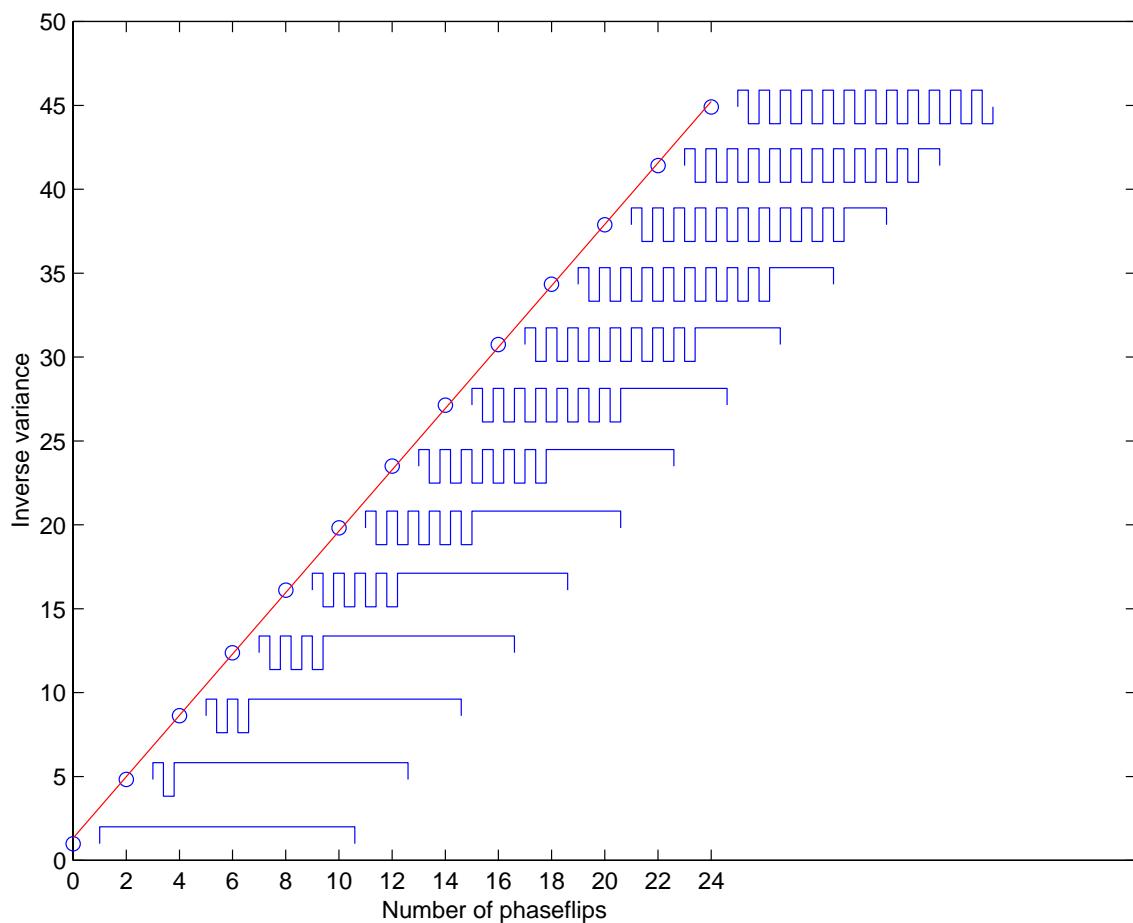

Amplitude and range error as function of target size

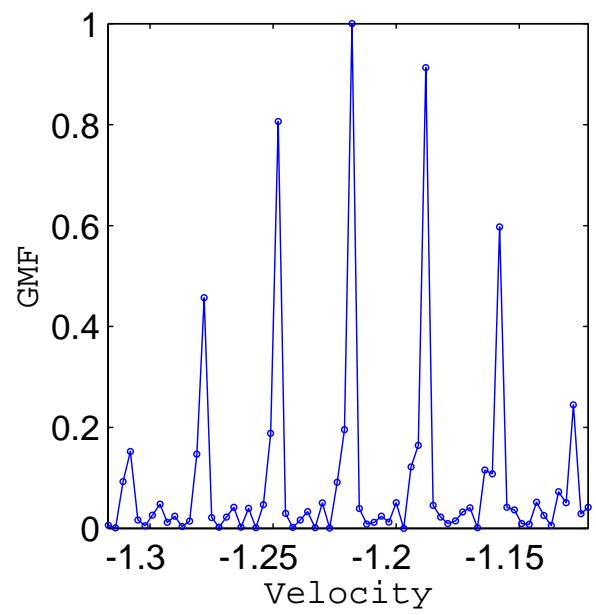

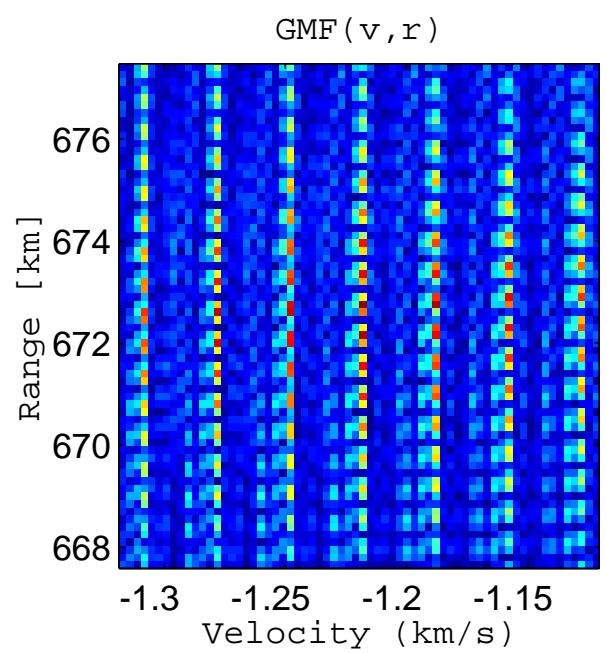

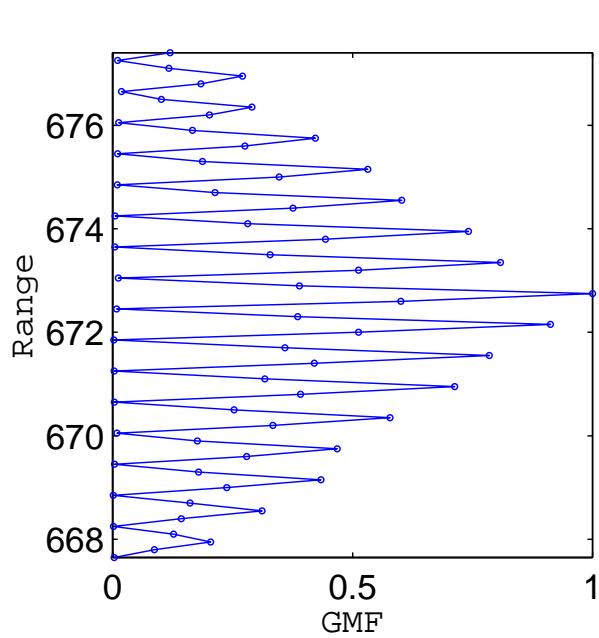

Velocity and acceleration error as function of target size

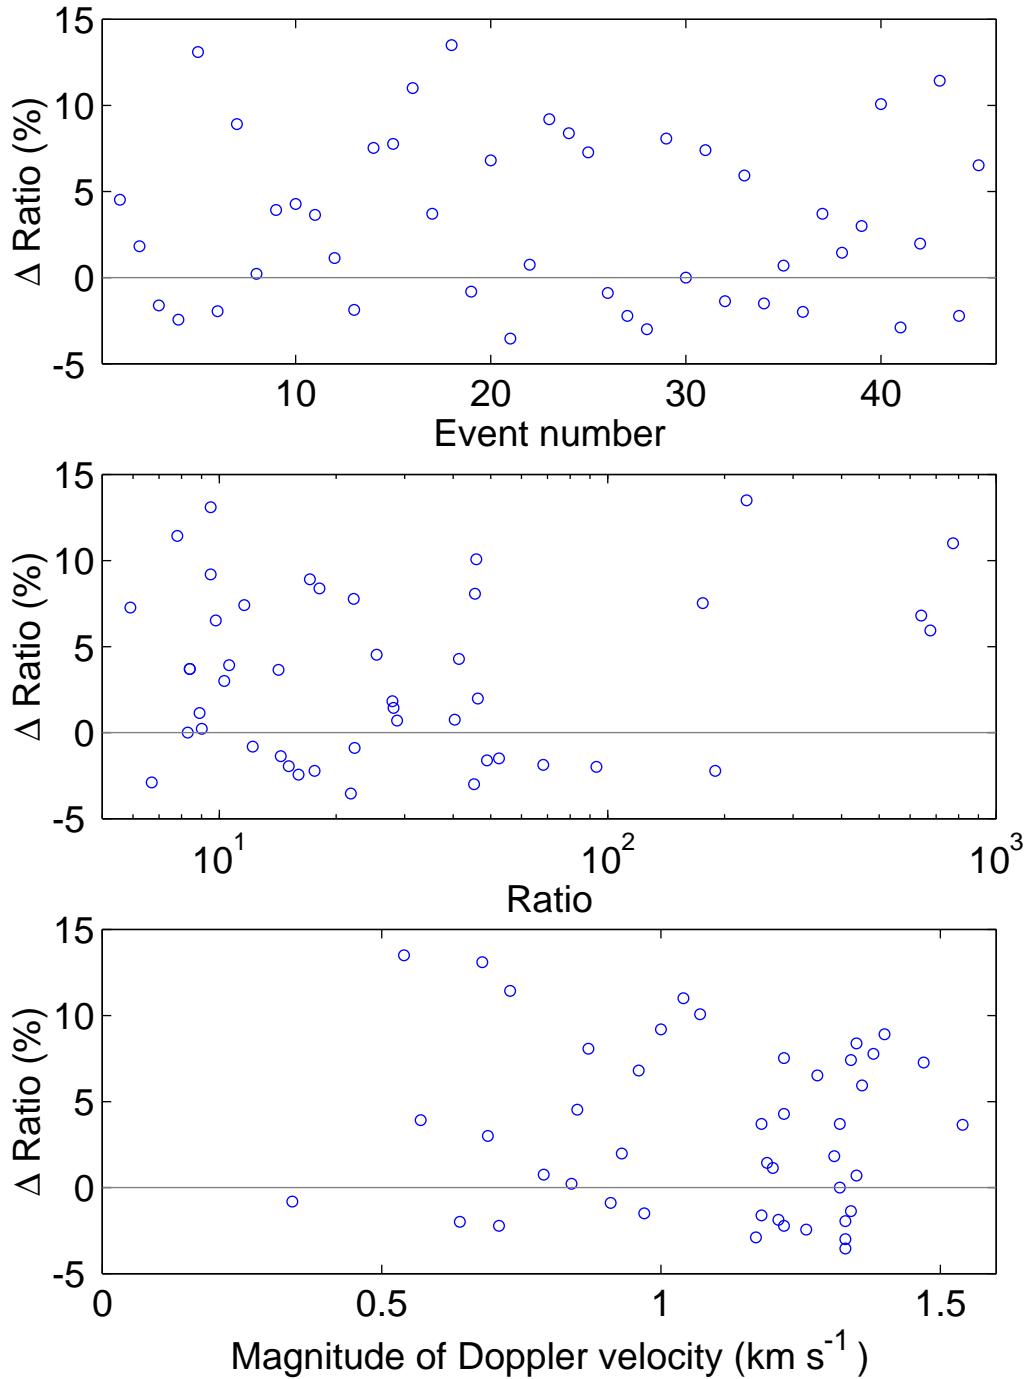

Effect of the number of phase flips to range accuracy

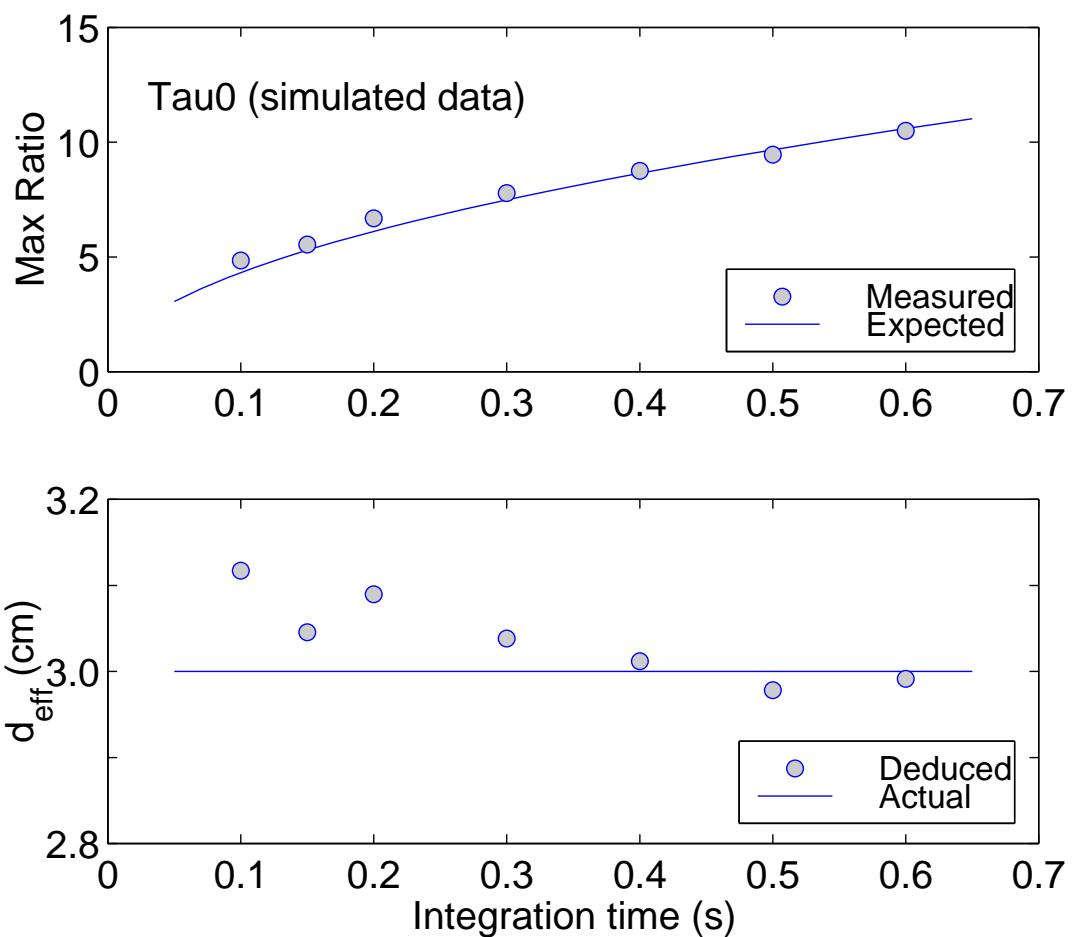

Two-dimensional GMF

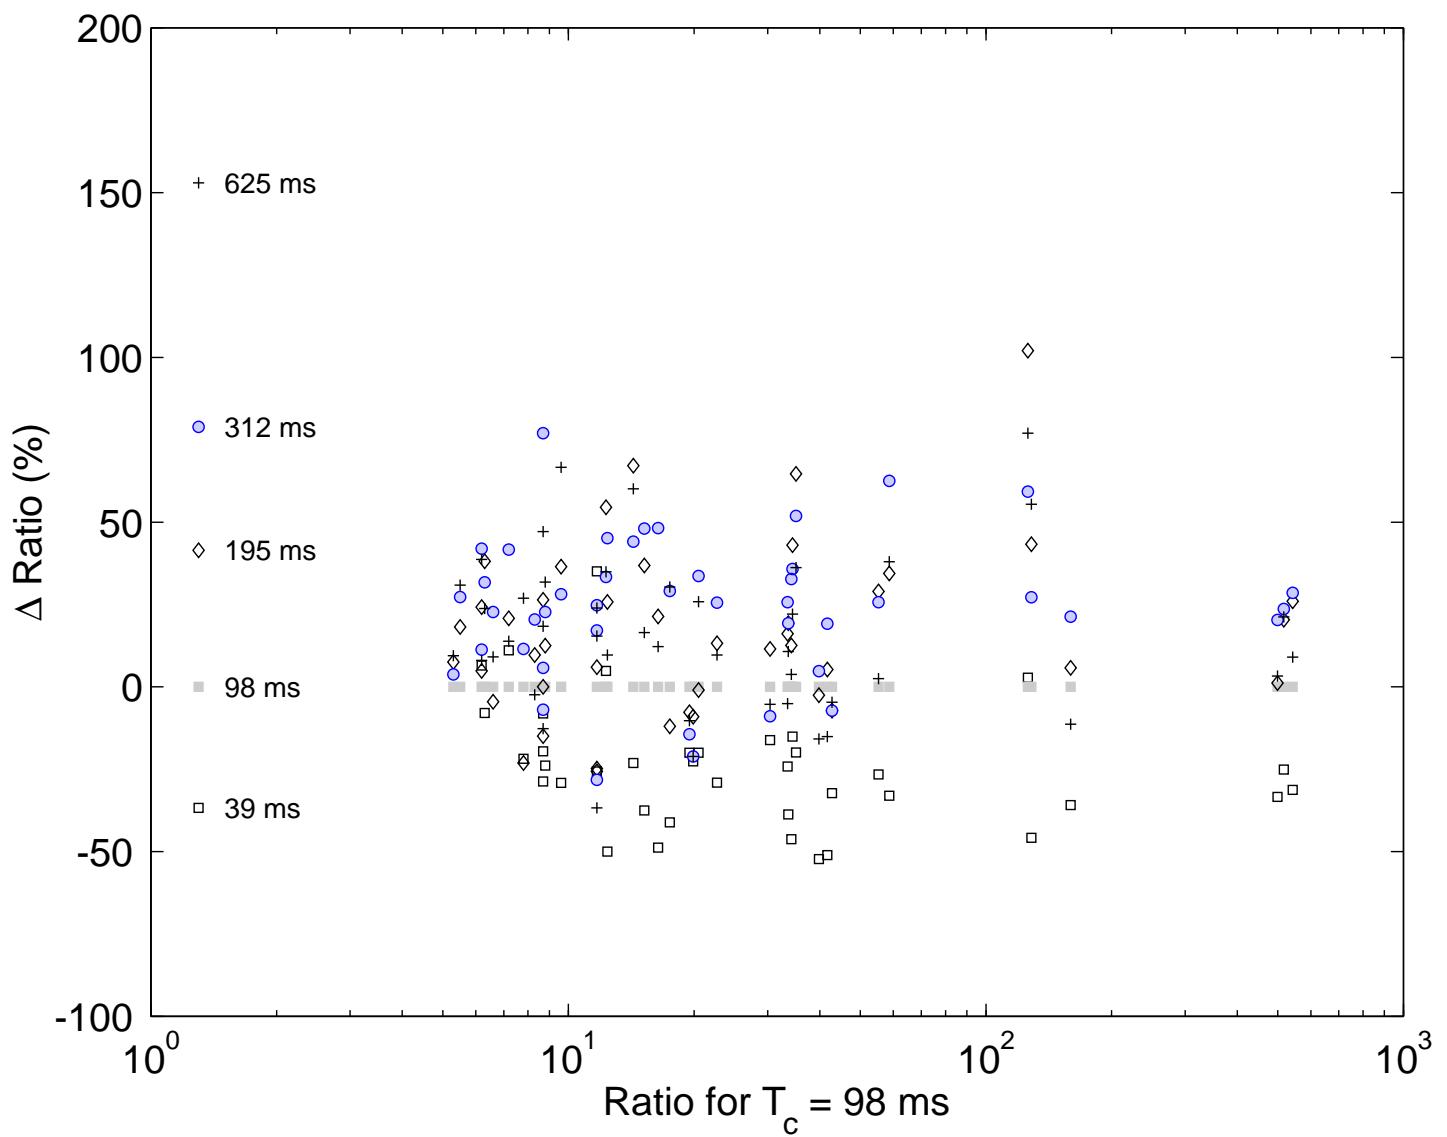

Effect of GMF algorithm on detection sensitivity

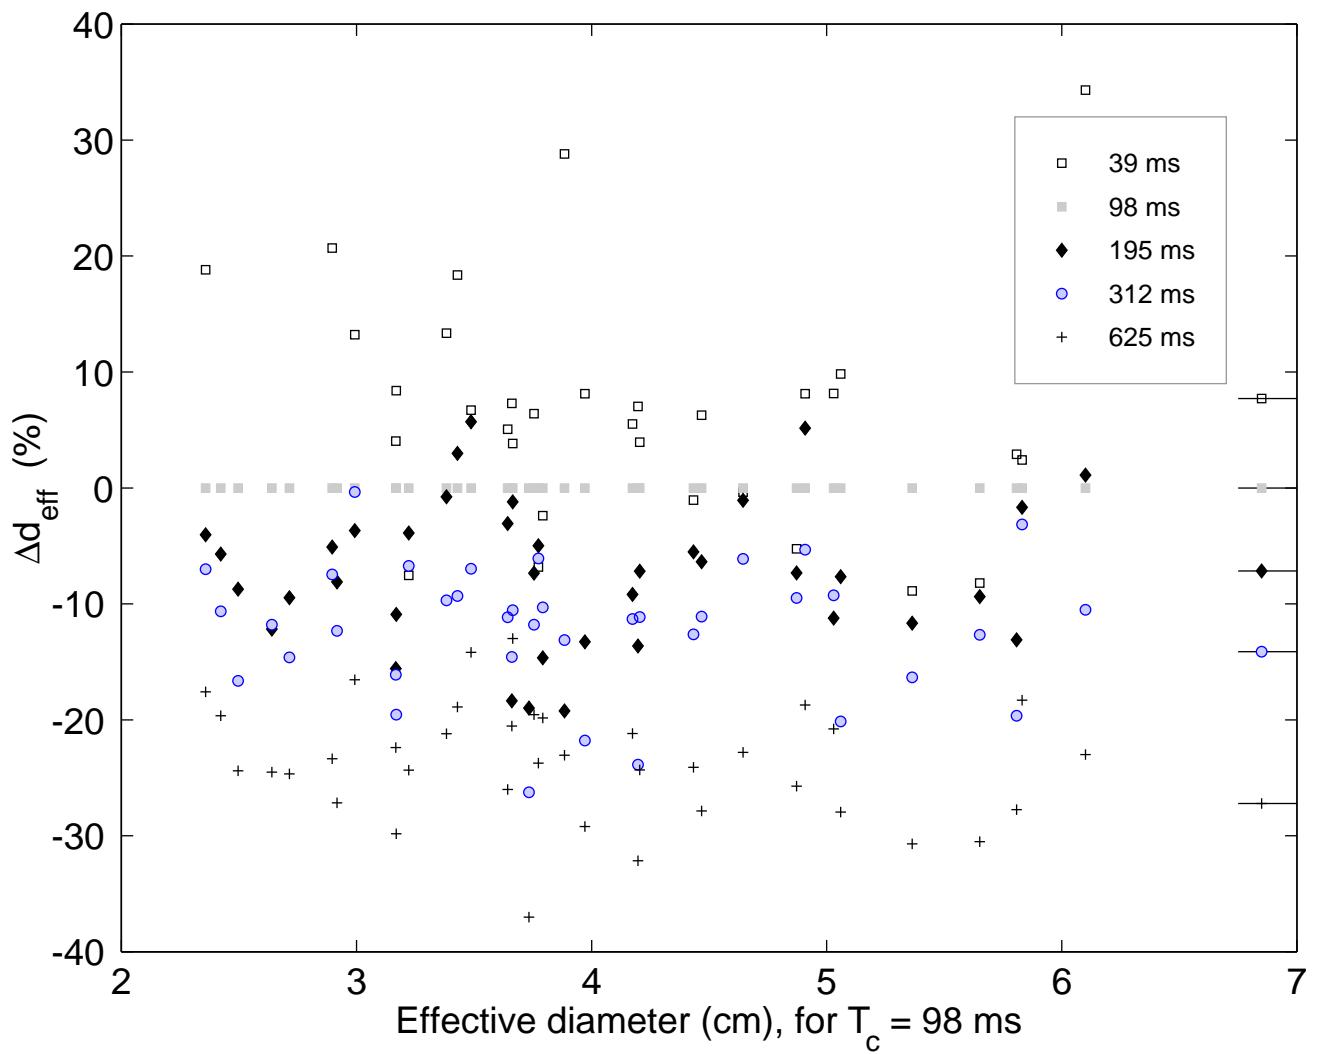

Coherence check with simulated data

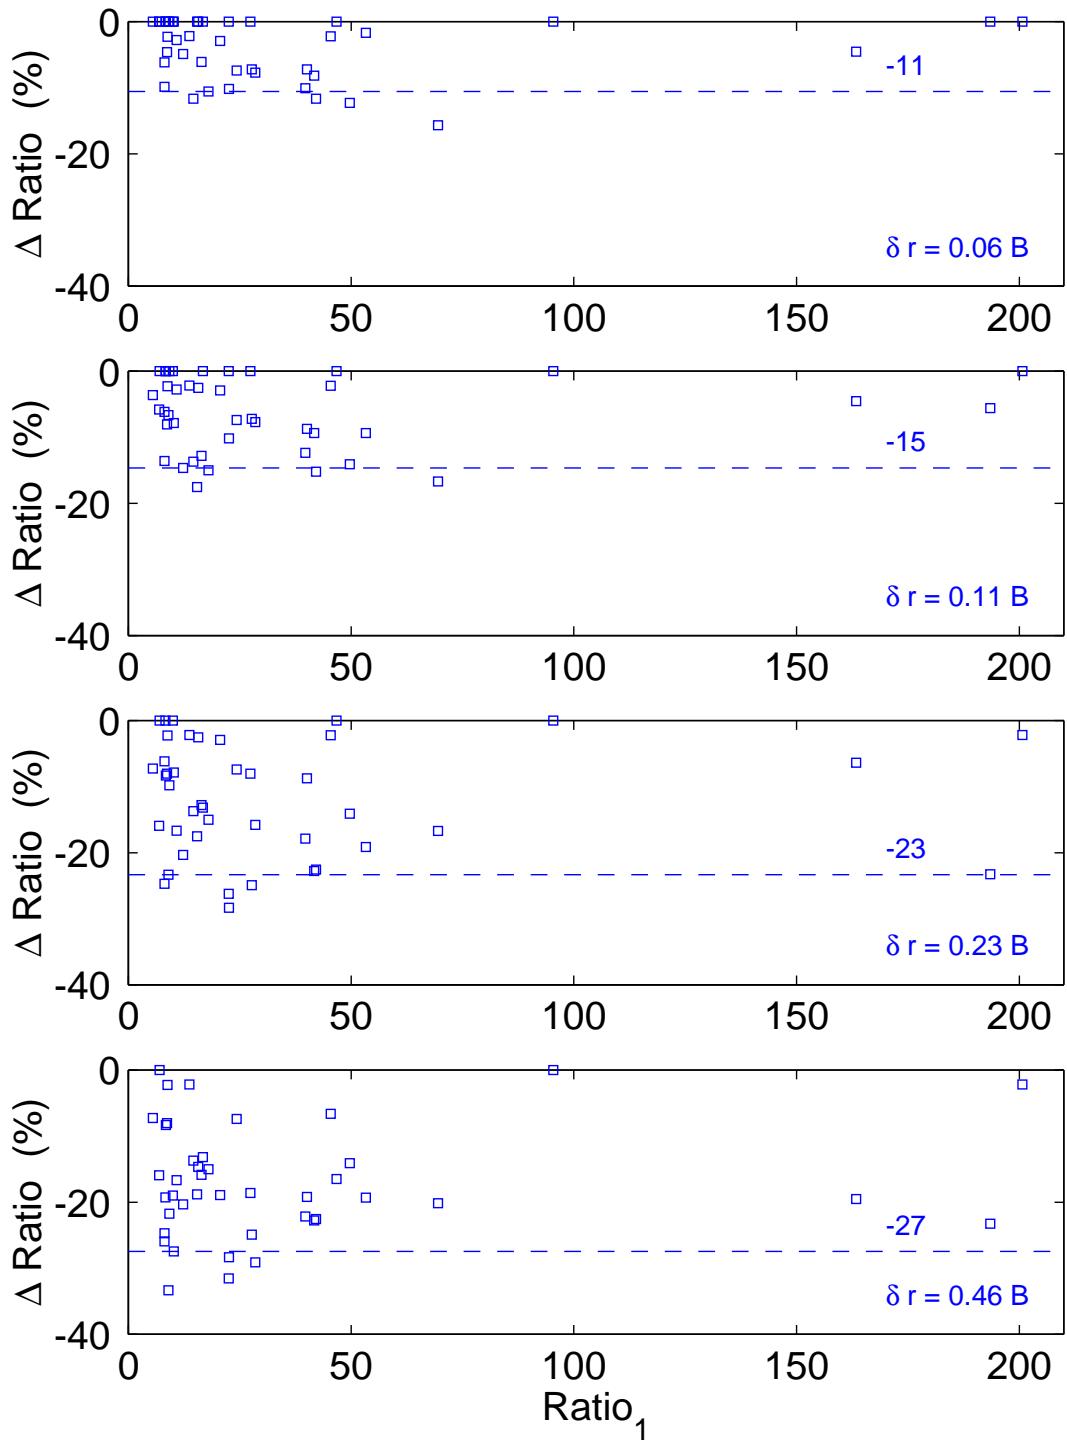

Dependence of \mathcal{R}_{\max} on integration time

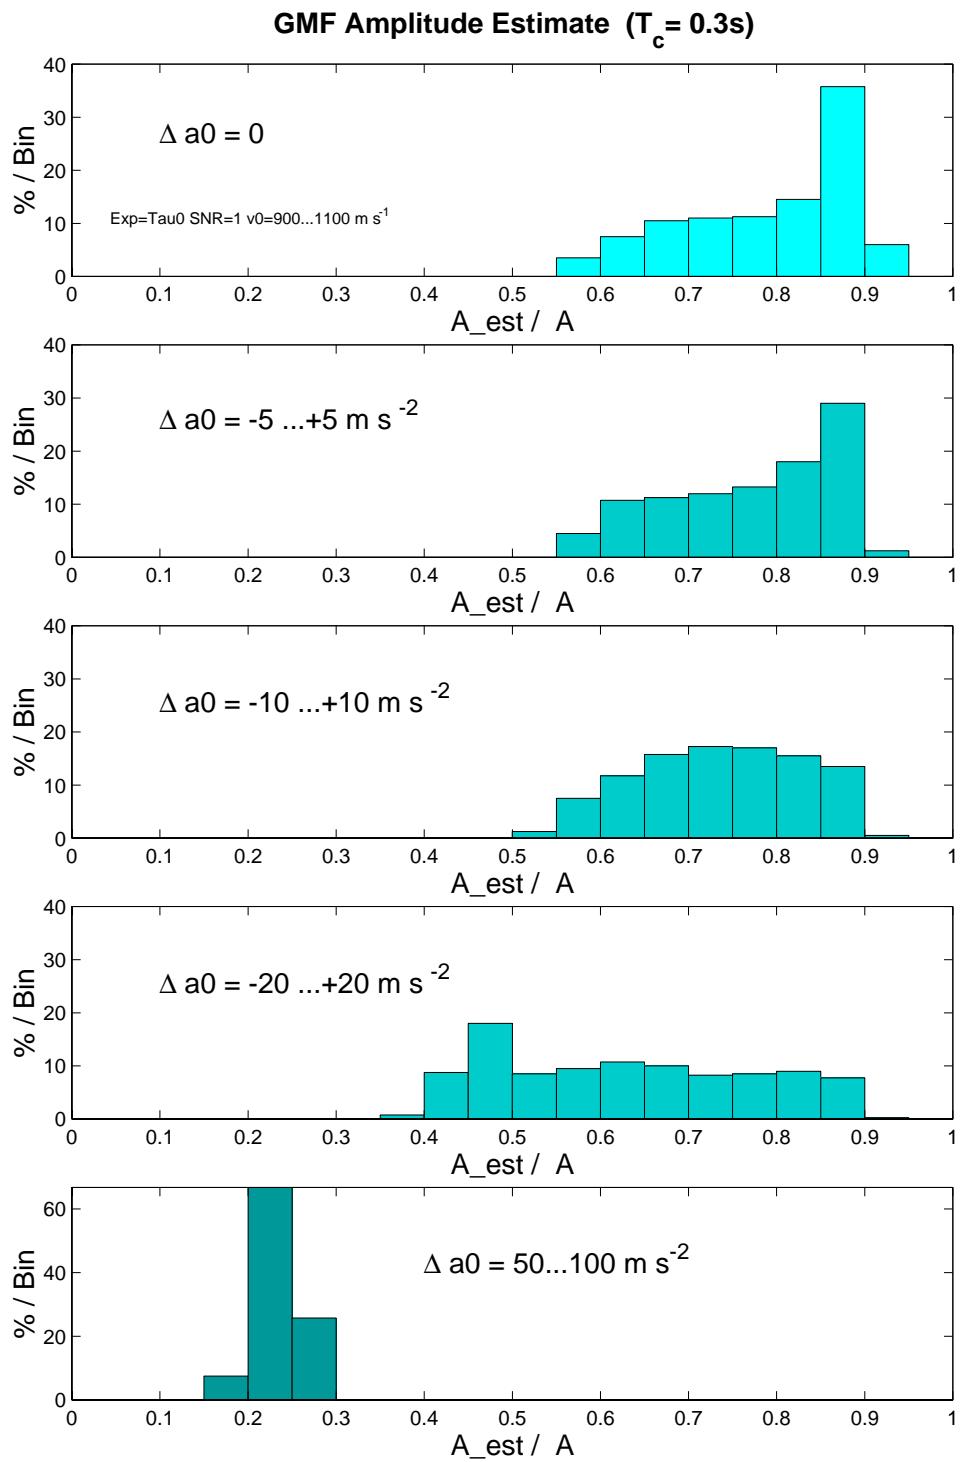

Diameter estimate for different integration times.

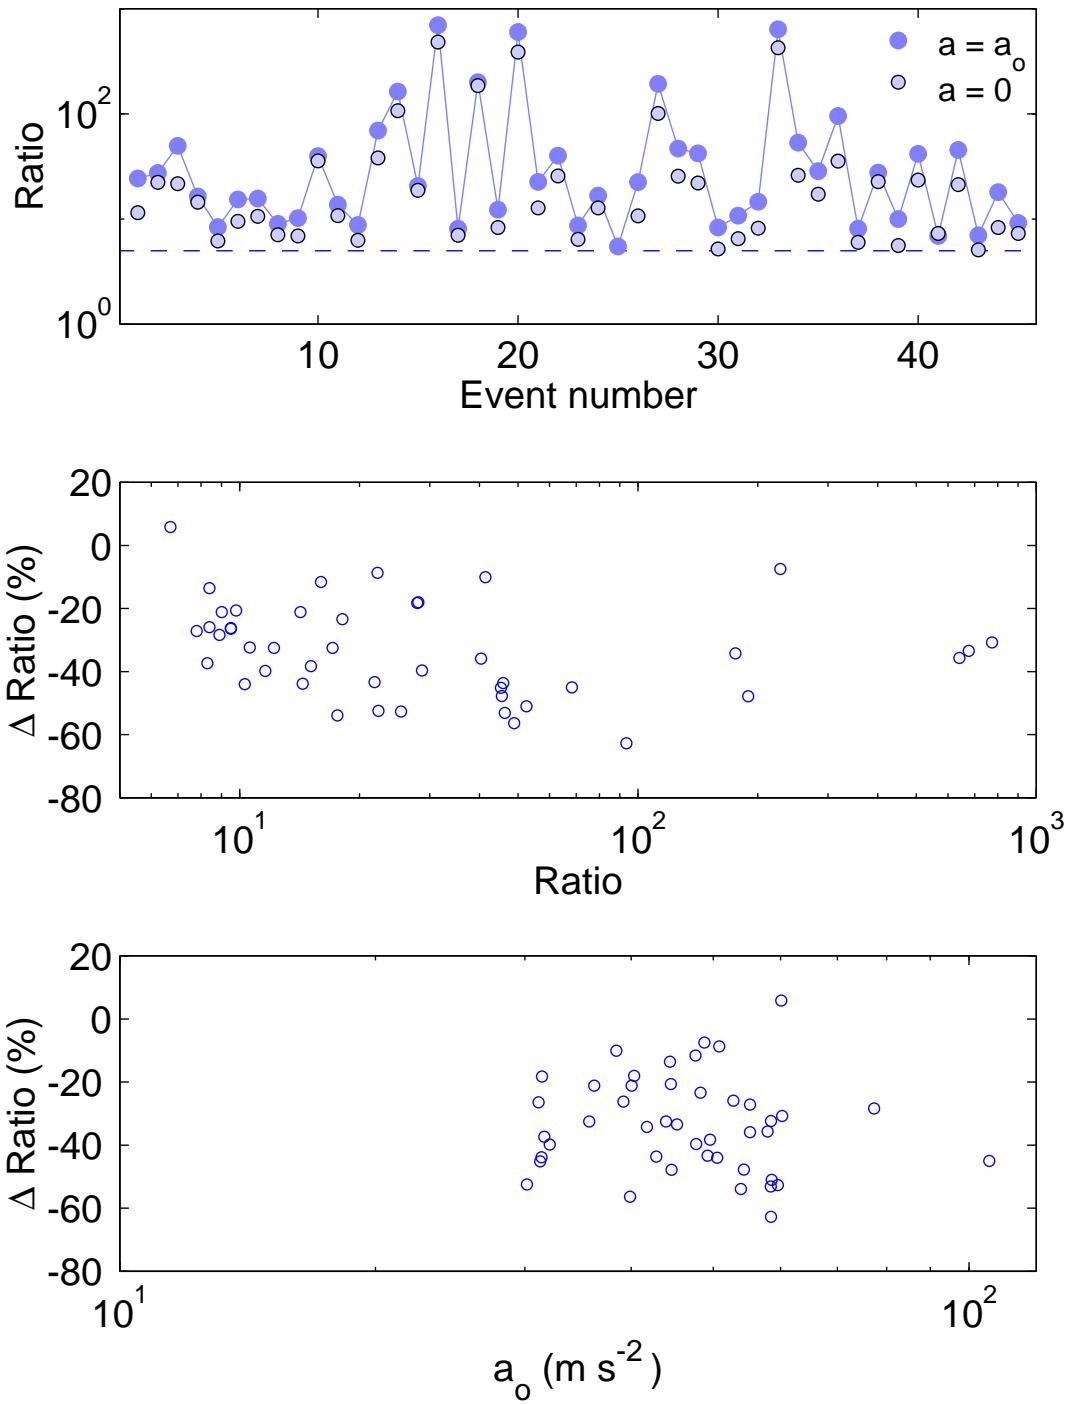

Effect of range gate spacing on detection sensitivity

Effect of acceleration correction to sensitivity (simulation)

Effect of acceleration correction to sensitivity (cp1lt data)

Required computing speed for real-time detection

	cp1lt	tau2	tau0
Sampling interval (μs)	0.5	0.5	1.0
Mflops in FFT/gate	0.27	0.27	0.27
Mflops in other ops/gate	0.44	0.53	0.56
Total Mflops/gate	0.71	0.80	0.83
Baud length (μs)	21	36	64
Range resolution (μs)	9	10	15
Number of gates/scan	740	666	444
Number of gates/s	1480	1330	890
Req. reading rate (MBytes/s)	2.6	2.6	1.3
Req. computing rate (Gflops/s)	1.1	1.1	0.7
