

# Heating carrier boards' configuration

## Heating Exciter VME crate

Heating exciter crate is having seven positions for the carrier boards. The positions are labelled as Master, 1, 2,...6 on top of the crate. Correspondingly, carrier board's position number is taped on the upper card-eject handle. On the lower card-eject handle is marked board select (BSx, hardwired on the back-plane) place, carrier board's (CBx) serial number (milled on the Printed Circuit Board) and DDS module's (DSx) serial number (milled on the PCB). Below is a table, which shows the situation 13.6.2008.

Position in the VME crate	Hardwired Board Select of the position	Carrier Board serial number plugged in the position (13.6.2008)	DDS module serial number on the Carrier Board (13.6.2008)	Notes
Master	0	2	6	
1	1	5	0	
2	2	4	9	
3	3	3	8	
4	4	7	5	
5	5	6	3	
6	6	1	4	

*Note! Output level of the DDS modules is varying, therefore carrier boards and DDS modules are numbered so carefully.*
